➔ **The diamond problem in Java refers to an ambiguity issue that arises in the context of multiple inheritance, specifically when dealing with interfaces containing default methods.**

21. what is static method and why are they introduced in Java?

➔ **A static method in Java is a method that belongs to the class itself, rather than to any specific instance (object) of that class.**

22. What is marker interface in Java?

➔ **does not contain any methods or constants.**

23. What is marker interface in Java?

➔ **does not contain any methods or constants.**

24. What is marker interface in Java?

➔ **does not contain any methods or constants.**

25. What is marker interface in Java?

➔ **does not contain any methods or constants.**

26. What is marker interface in Java?

➔ **does not contain any methods or constants.**

27. What is marker interface in Java?

➔ **does not contain any methods or constants.**

28. What is marker interface in Java?

➔ **does not contain any methods or constants.**

29. What is marker interface in Java?

➔ **does not contain any methods or constants.**

30. What is marker interface in Java?

➔ **does not contain any methods or constants.**
